Skills

Data Engineering & Visualization

Apache Kafka · Spark Streaming · InfluxDB · Grafana · Streamlit · Power BI

Optimization

Scheduling · Constraint Programming · MIP · CPLEX · CP Optimizer

Industrial Tools

Microsoft Excel · MATLAB · SAP · 5S Methodology

Data & AI

Python · Pandas · scikit-learn · XGBoost · NLP · Machine Learning

Strengths

Technical Curiosity

Teamwork

Complex Problem-Solving

Communication

Analytical Thinking

Interests

Voyage

Sport

Ghassen Alimi

Industrial Engineering Student

As a third-year engineering student at ENSIT, I am passionate about transforming industrial data into actionable insights and informed decisions. I combine modeling, machine learning, and hands-on field observation to enhance the performance, reliability, and efficiency of production systems.

Education

3rd year Industrial Engineering

Since 2024 [Ensit](#) Tunis, TU, Tunisia

Preparatory studies for engineering schools bachelor's

From 2022 to 2024 [FSM](#) Al Munastir, MS, Tunisia

General Certificate of Secondary Education

From 2021 to 2022 [LHBG](#) Gafsa, GF, Tunisia

Professional Experience

Observational Internship — Engineering Department

From Jun. 2025 to July 2025 [STEG](#) Gafsa, GF, Tunisia

- Analyzed connection requests and reviewed customer files while considering network constraints.
- Conducted technical analyses and calculations related to short circuits, system stability, and protection selection.
- Performed field visits, compliance inspections, and coordination with implementation teams.

Industrial Internship — Preventive Maintenance

From July 2026 to Aug. 2026 [YAZAKI](#) Gafsa, GF, Tunisia

- Assisted with the preventive maintenance of crimping applicators and monitored their availability.
- Performed disassembly, cleaning, inspection, calibration, and dimensional checks in accordance with crimping standards.
- Prepared reports and conducted data analysis using **Power BI and Excel**, following the **5S methodology**.

Projects

Predictive Maintenance of Turbofan Engines

Academic Project — NASA CMAPSS Dataset

- Developed a real-time data processing pipeline using **Kafka, Spark Streaming, InfluxDB, and Grafana**.
- Developed a **Python/XGBoost** model to estimate **Remaining Useful Life (RUL)**.

Predictive Decision Support System — NCAR / Industry 4.0

Industrial Data Project

- Designed a **Streamlit dashboard** based on **604 shifts and 22 production lines**.
- Performed Excel data extraction and **NLP-based feature engineering**.
- Developed a **Random Forest** model, interpreted predictions using **SHAP**, and simulated improvement scenarios using **Monte Carlo methods**.

Comparative Study of CP / MIP for Flow Shop Scheduling

End-of-Year Project — ENSIT

- Implemented **constraint programming (CP)** and **mixed-integer programming (MIP)** models for permutation and non-permutation flow shop variants.
- Conducted experiments using **Taillard benchmarks, CPLEX, and CP Optimizer**.
